I am a self-taught PHP web developer from Otukpo, Benue State, Nigeria. I started coding after completing my WAEC in 2018 and have spent the years since building real, working web applications through discipline, curiosity, and hands-on practice. I specialise in building multi-role PHP platforms systems where different types of users each get their own tailored experience. My biggest project to

PROJECTS & WORK

Otukpo Housing

PHP MySQL Bootstrap 5 PDO MVC

2025 – Present

Multi-role property rental platform built from the ground up for Otukpo, Benue State. The most complex project I have built — it required designing a complete multi-user architecture and a full admin panel from scratch.

- Separate portals for tenants, landlords, agents and administrators.
- Admin panel with chart data, property & user management.
- Multi-image upload with featured image selection; amenities stored as JSON.
- Pagination, filtering, WhatsApp contact cards, and dark mode on all portals.
- Custom MVC-like architecture with PDO/MySQL and Bootstrap 5.

Shon360

PHP MySQL Bootstrap

2024

A fully functional e-commerce website built from scratch with PHP and MySQL.

- Product listings, shopping cart management, and order handling.
- No framework — all business logic written in pure PHP/MySQL.

🌐 github.com/Elonyized/shop360

RentLink

PHP MySQL CSRF Sessions

2024 – 2025

Earlier rental platform. Its architecture lessons directly shaped Otukpo Housing.

- Secure agent auth: session fixation prevention, CSRF, flash messaging.
- Two-column split-panel UI with navy and clay design tokens.

Front-End Practice Projects

HTML CSS JavaScript

2023

School website, Digital Checklist App, and Digital Calculator — three projects that built my core front-end fundamentals.

- Responsive multi-section layouts, DOM manipulation, and logic handling.
- Covered operator precedence, event listeners, and vanilla JS state management.
